Macro & Cross-Asset Monitor

Sample research output | 31 August 2026

Executive view

SPY rose 0.82% over the latest week. WTI rose 1.34% over the latest week. US10Y fell 1.5 bps over the latest week. USDCAD fell 0.99% over the latest week.

Market dashboard

Series	Level	1D	1W	1M
SPY	740.32	-0.08%	+0.82%	+8.37%
XLF	142.83	-0.20%	+0.65%	+8.09%
XLE	332.37	+0.69%	+1.01%	+3.60%
WTI	328.83	+1.46%	+1.34%	+0.34%
USDCAD	1.16	-0.62%	-0.99%	-1.45%
USDKRW	1,398.31	+0.12%	+0.27%	+2.02%
US10Y	3.38	-0.35 bps	-1.50 bps	-4.70 bps

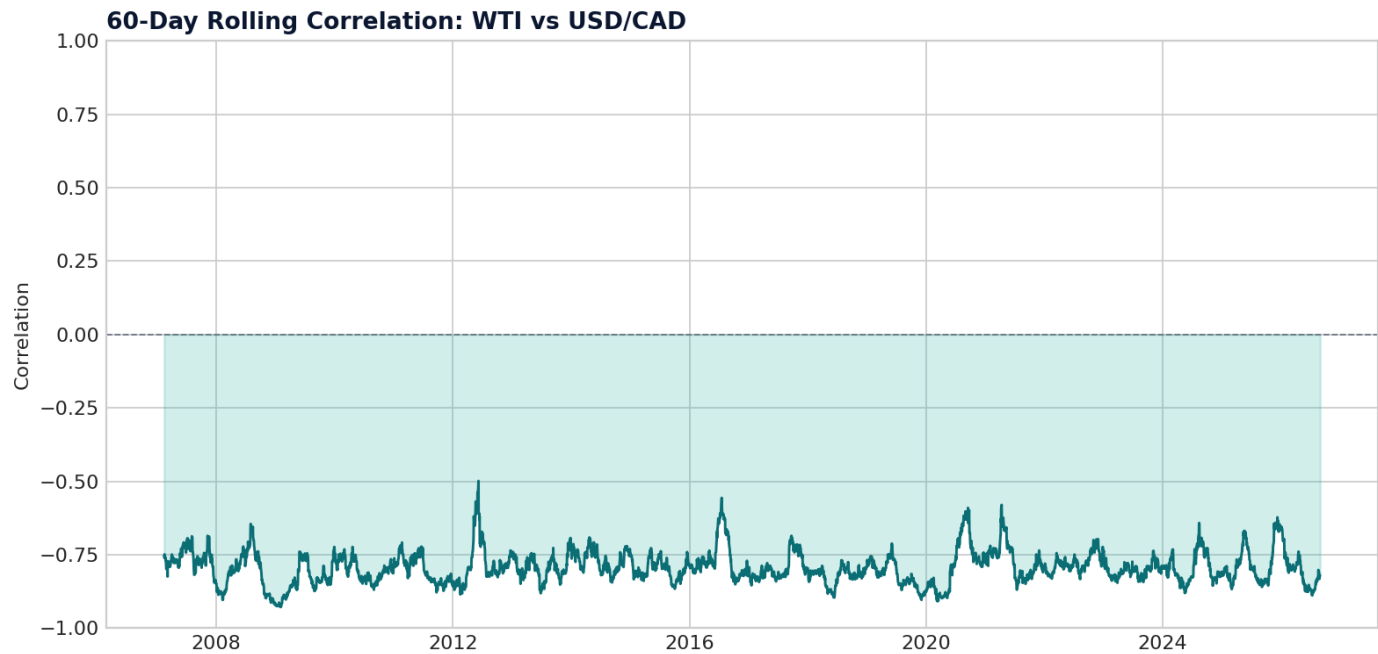

Reading the screen: price and FX moves are shown in percent; yield moves are shown in basis points. FX pairs are quoted as US dollars against local currency, so a decline in USD/CAD or USD/KRW represents local-currency appreciation.

Cross-asset transmission

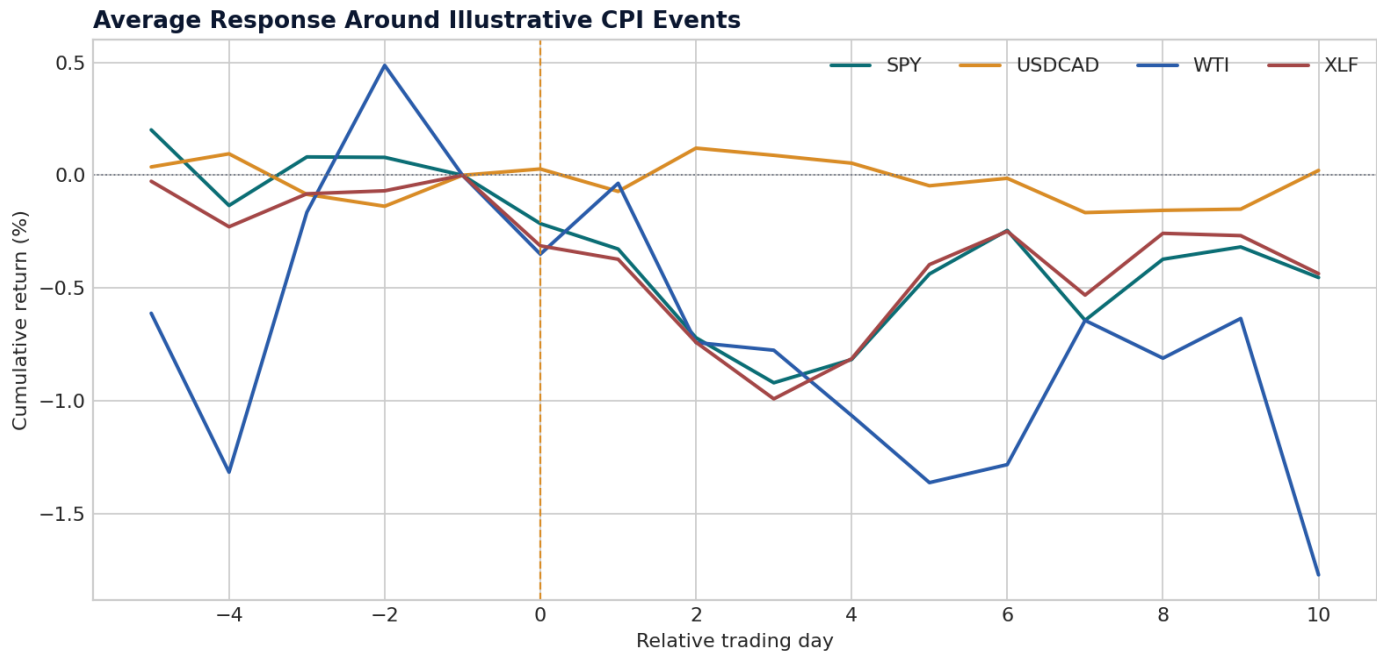

Selected daily-move correlations

Driver	SPY	XLF	XLE	USDCAD	USDKRW
WTI	+0.40	+0.40	+0.94	-0.80	+0.26
US10Y	-0.32	-0.05	-0.10	+0.06	-0.10

The sign of an FX pair matters. A decline in USD/CAD means CAD appreciation; therefore a negative WTI/USD-CAD correlation is consistent with stronger oil prices coinciding with a firmer Canadian dollar. Correlation is time-varying and should be treated as a monitoring signal, not a structural coefficient.

Event study & portfolio risk

Illustrative portfolio: 40% SPY / 25% XLF / 20% XLE / 15% WTI

Portfolio metric	Estimate
Annualized return	9.2%
Annualized volatility	16.1%
Sharpe ratio	0.45
Beta vs SPY	0.94
Maximum drawdown	-38.7%

Historical stress windows

Scenario	Return	Volatility	Max drawdown
Global Financial Crisis	-29.6%	34.3%	-38.1%
COVID Selloff	-9.1%	29.8%	-16.8%
2022 Rates Shock	-7.3%	14.6%	-14.9%

Methodology and limitations

Returns are close-to-close and assume daily rebalancing with no transaction costs. VaR and Expected Shortfall use the historical distribution. Event paths use trading-day windows and a day -1 baseline. The bundled dataset and event calendar are synthetic, designed to make the project reproducible when live APIs are unavailable. They must not be used for investment decisions.
